BINARY OPTIONS ULTIMATUM

[How to install Indicators,
Templates, Robots into MT4 >>](#)

[Recommended Binary Broker >>](#)

[More Binary Options Strategies >>](#)

Introduction

Binary options (also known as digital options, two way options, and all or nothing options) are a quick and easy way to trade any market – like stocks and Forex for example. Instead of the usual trading methods that deal with many different factors – like stoploss, lot size, account management...etc – what you would be doing here is a simple process: you need to “bet” on future market’s movement.

How to trade binary options?

First step is to select an “asset”, this asset could be something like a stock share for a specific company or a specific currency pair for example. Next step is that you need to decide if this asset is going to go up or down during specific time period which is called the “expiration time”, and place a bet or make an order. If you think price will increase, your order is a “call option”. If you think price is going down, your order would be a “put option”.

How profits are made?

When the expiration time is over and your prediction is right, then you will collect the profits agreed upon with your broker. If your predictions are wrong, you lose your money.

But..you don't have to be %100 right when you're trading binary options. That's why so many traders are attracted to it. For example, if you're using binary

options to trade forex, you need to be correct for at least .0001 move. And if you're trading stocks you only need to be right by at least one penny. If you are right, by at least these minimum amounts, then you'll get FULL payment for the whole bet or prediction.

Why it's better than normal/common trading? For many reasons, for example...

1 – It's a lot easier to understand than normal trading. Basically, binary options trading is a simple yes/no game! There are no complicated or difficult variables/expressions like lot size, market orders and limit orders, etc

2 – No margin calls. That means you wouldn't wake up one day and find out that your losing trade/s just wiped out your entire account or most of it, and you just received "the call" from your broker.

3 – No Spreads, No Stop loss. one of the most important advantages of trading binary options is the fact that with this method, there is no stop loss needed. you're betting or predicting price movement without any need to place an actual "trade" so you don't have to use a protective stop loss. if your prediction is right, you get profits. If it's wrong, you lose. It's that simple.

4 – Limited Risk. Unlike normal trading- if no money management measures were taken- binary options are very limited in risk because you know in advance the maximum amount that you're allowed to lose.

Binary options outcomes and returns:

"In The Money" or ITM : Options expire ITM would provide a specific percent as a return. For example..for every \$100 invested, the return is %80. That means you would receive \$180. The main investment + the profit percent.

"Out Of The Money" or OTM : Options expire OTM would cause the original investment to be lost.

"At The Money" or ATM : Options expire ATM would cause the original investment to be returned full. No loss, no gain.

There are mainly two kinds of options: High/Low options, and One Touch options.

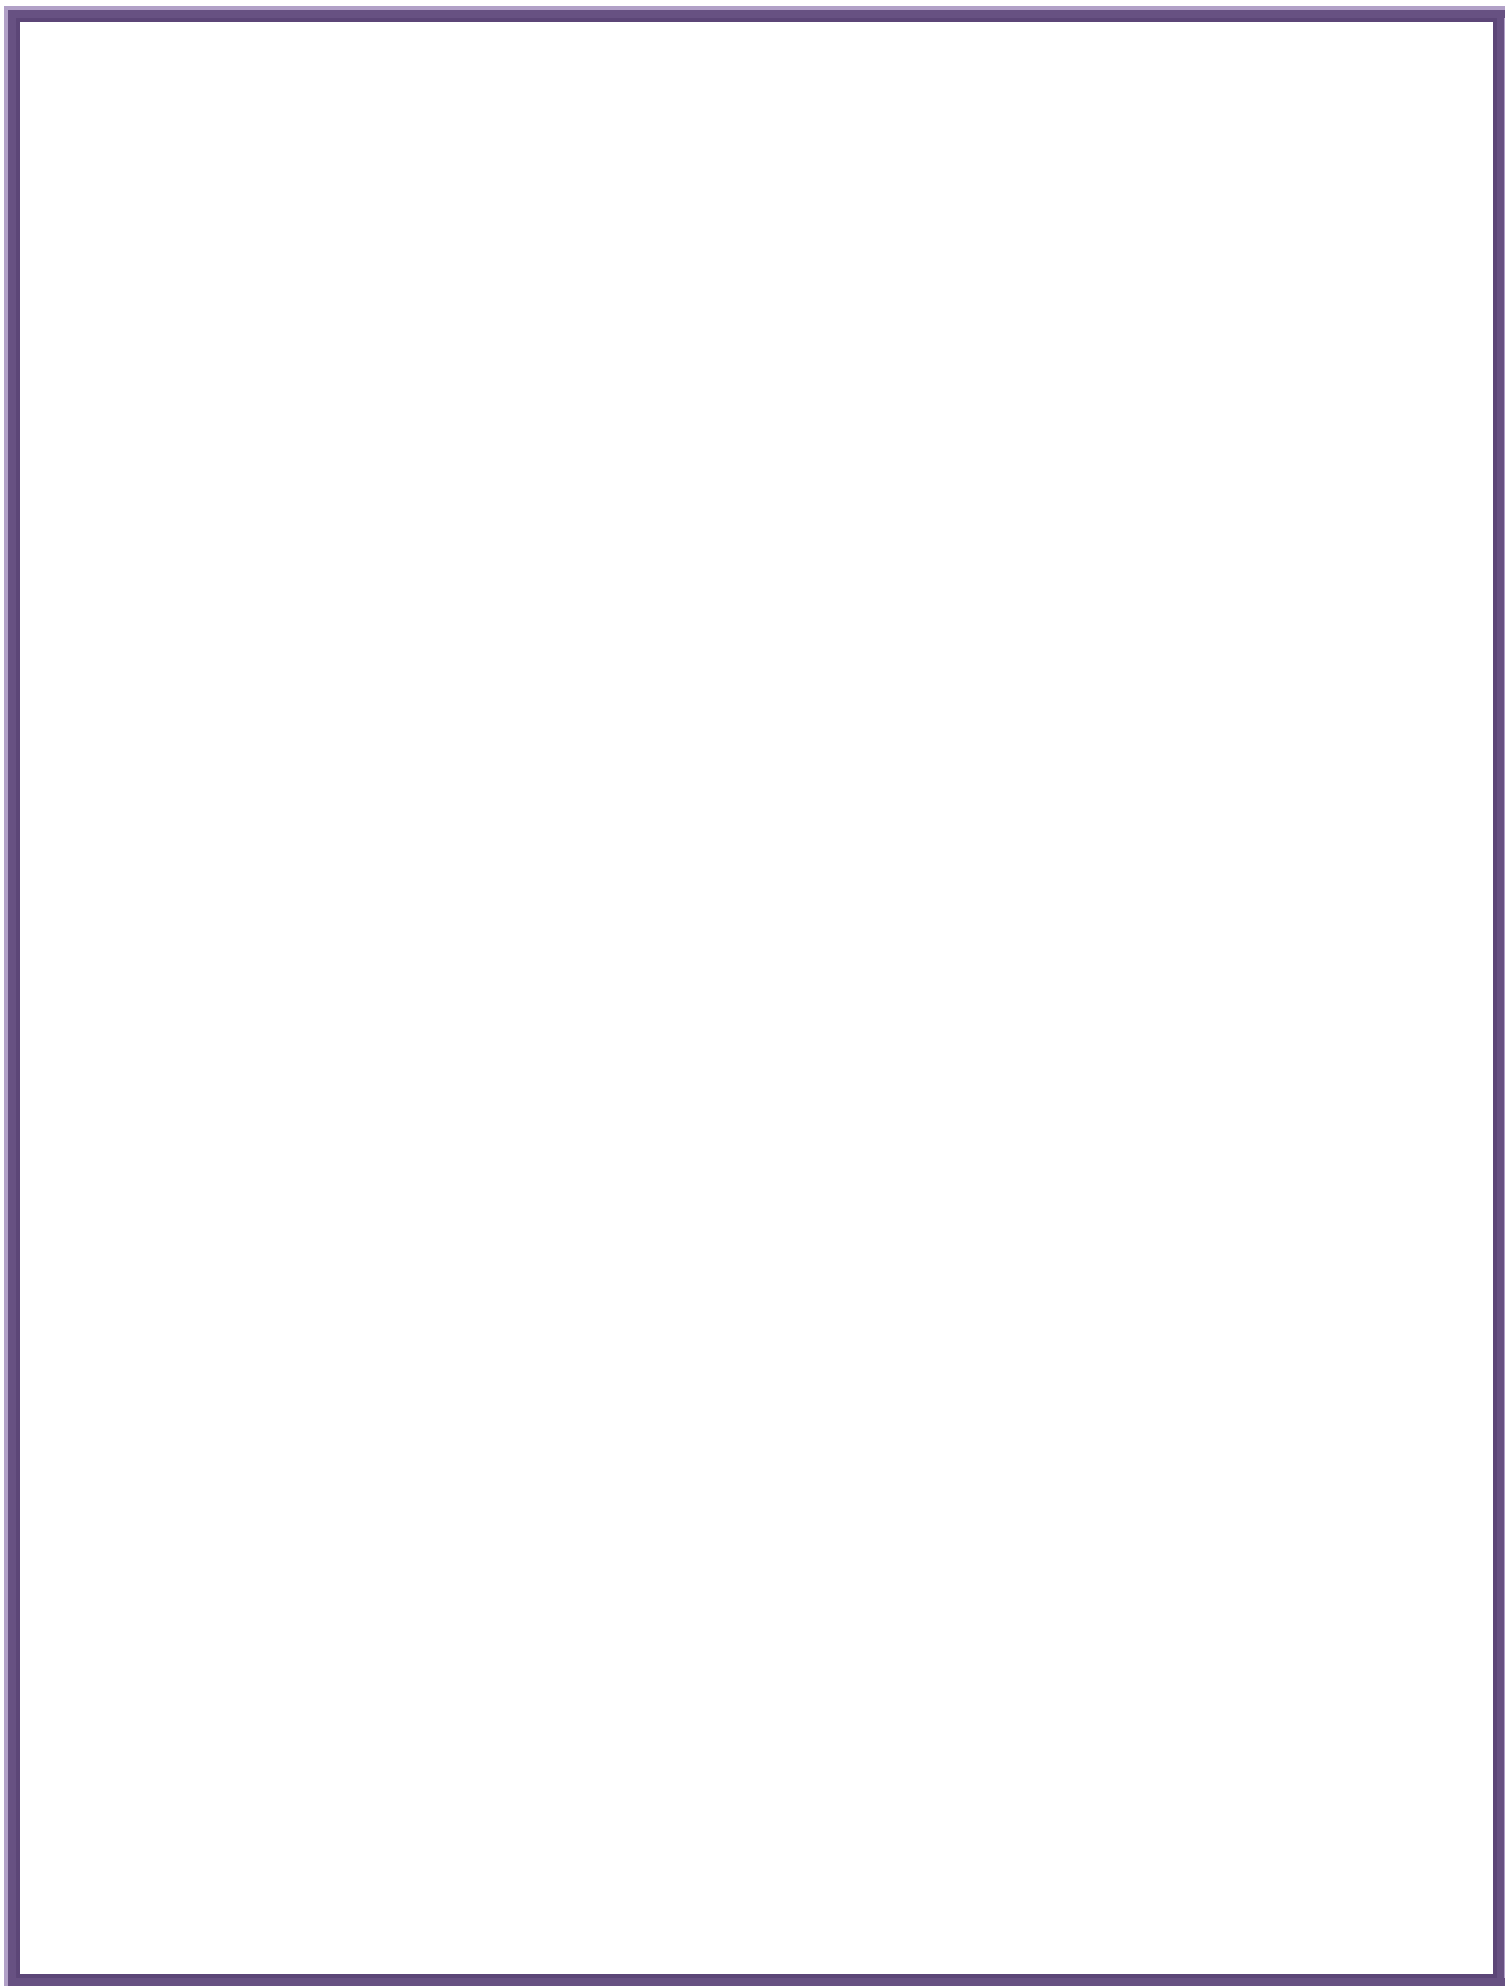

High/low options mean that the option expires when price reaches a specific high or specific low target. One touch option ends when price reaches a specific target at any time before expiration period.

There is also a new option – available with few brokers – called 60 seconds option. The expiration period for this option is only 60 seconds and it's recommended for experienced traders.

Things to keep in mind while you're trading binary options:

There are no demo/practice accounts before you deposit real money and it's only available from few/specific brokers and not all of them. Not only that, but you have to contact them and clearly ask for a demo account.

Another thing is, you shouldn't think that just because the risk is limited that it's not there. There is still risk, and it's not an easy one to handle if you don't know what you're doing. Because when you add the element of time to your trades, you have an additional factor. With normal trading, you can keep a trade for as long as it takes until it hits target or stop loss. But with binary options, there is a time limit or expiration period. Your prediction should be correct within this time limit.

There is no spread – the same price is given for selecting a “Call” option or a “Put” option. Because the returns are fixed, the same return on investment (ROI) will apply for a \$1,000 investment as a \$100,000 investment – there is no difference in initial investments to earn exceptional ROI as compared to other financial instruments.

Binary options require small initial investments and can replace other high risk instruments in an investment portfolio.

- No Spread
- Fixed Risk
- Small Investment
- High Returns
- 24/7 Access
- 60-Second Options
- Profit from Market Volatility

Exceptional profits are available even as markets decline and at all hours of the day and night as the software is connected to dozens of markets.

The software is easily accessible 24/7 from any location with a computer and Internet connection.

The range of binary contracts on offer covers a comprehensive range of markets. These include over ten stock indices, major commodities (Gold, Silver and Oil), Forex currency pairs and major international stocks.

Binary Options Ultimatum System

Most – if not all – binary option brokers only provide simple trading platforms with basic order/trading features. With no advanced platform that allows you to analyze the market, so you need to use a different platform for that then simply copy and paste your trading signals to any binary options broker that you're working with.

The system that we're going to use requires MT4 platform – Metatrader 4 platform – to be installed on your computer. You can choose to open a free account with any broker that supports MT4 platform and provides the option of trading different kinds of markets within the same platform. like Forex and Stocks.

Before you can use the robot, you must download and install the MetaTrader4, a professional trading platform. You can download from:

<http://www.metaquotes.net>

After the download is complete, please double click on the setup program (m4setup.exe) and you will get a screen like this:

Step 2: Open a demo account

Launch MetaTrader4 platform after you finish the installation. You will be prompted to open a demo account.

Open an Account

Personal details
To open an account, please fill out all the following fields:

Name: min 6 chars

Country: State: min 2 chars

City: min 2 chars Zip code: min 3 chars

Address: min 6 chars

Phone: min 6 chars Email:

Account Type: Currency:

Leverage: Deposit:

☒ I agree to subscribe to your newsletters

< Back Next > Cancel

Fill out the form and follow the instruction to set up a demo account. Please remember to write down the login id, password and investor id. Keep it in a safe place.

You can download MetaTrader4 user guide from the following link:

<http://www.metaquotes.net/userguides>

Now that you have installed the MetaTrader4 program and opened a demo account.

Next, you need to copy the indicators – provided with this system – to MT4 indicators folder in program files. Windows>>>Program files>> MT4 platform >> Experts>>> Indicators.

Then copy the template's file – provided with the system as well – to MT4 templates folder in program files. Windows>>>Program files>>>MT4 platform >>> Templates.

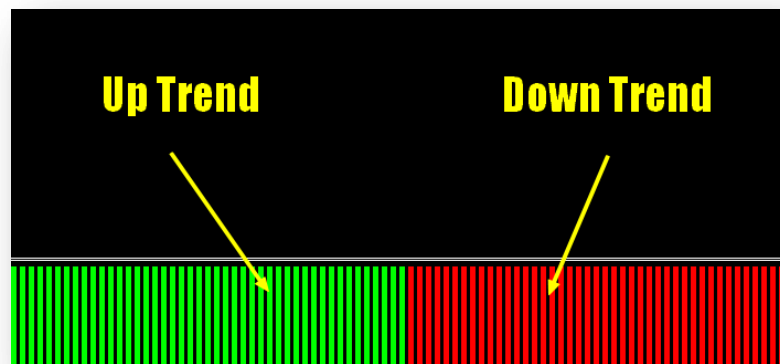

Last step, is to restart MT4, choose the market or currency pair that you would like to trade, right click on chart and click on the template's name. Here is how your chart should look like:

As we explained before, when you're trading binary options your main concern is price direction because that's what's important. You should predict price direction without any need to worry about things like lot size or stoploss.

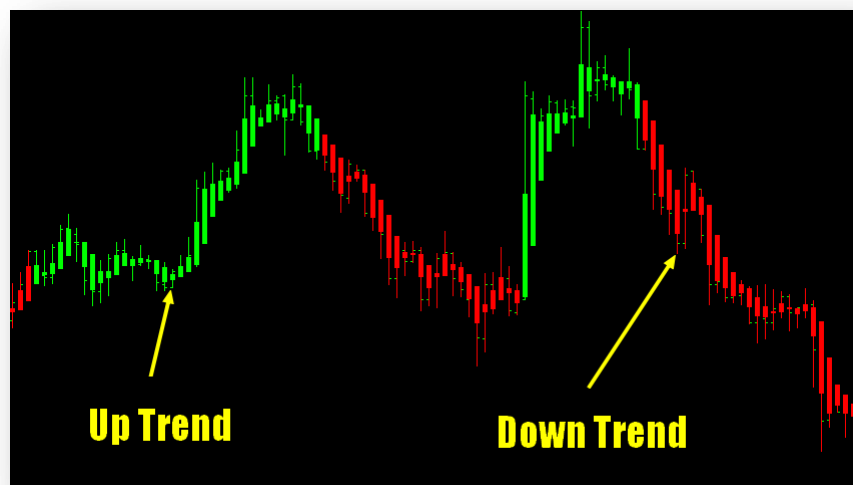

That's why our system will only focus on: price direction – entry points – expected targets. To do that, we're going to use 6 indicators with this system.

1 – Trend Bars Indicator

This indicator is based on [RSI](#) formula and the signals generated are very easy, simple and powerful. Lime Green bars = up trend = buy signal. Red bars = down trend = sell signal.

2 – Trend Candles Indicator

Trend candles indicator is based on [stochastic](#) and signals provided are : Lime green candle = up trend = buy signal, Red candle = down trend = sell signal.

3 – Entry Arrows

This is a breakout indicator and you can read it easily by following arrow's colors and direction. Lime green upward arrows = buy signal, Red downward arrows = sell signal.

4 – Wave Signal Alerts

This is a high/low indicator that shows last higher highs and lower lows. It repaints, so it's only used for visual confirmations and guidance.

5 – Trend Channel

6 – [Pivot Targets](#)

Pivot targets indicator is going to be used for two things, first we're going to use it to learn the most powerful support and resistance levels and those are going to be used for targets. Green lines = support, red lines = resistance.

With binary options, brokers decide the targets (order/trade limits) what we need to do is to compare those limits with our pivot targets. If the limits or targets provided by the broker are one of our pivot levels or within those levels then we can trade this option. If the target provided by the broker is beyond those levels then we should pass this trade.

The other thing is that we're going to use this indicator to get the daily range numbers. From those numbers we will learn the expected range of the day and if price still has enough "room" to move and hit our expected targets or not.

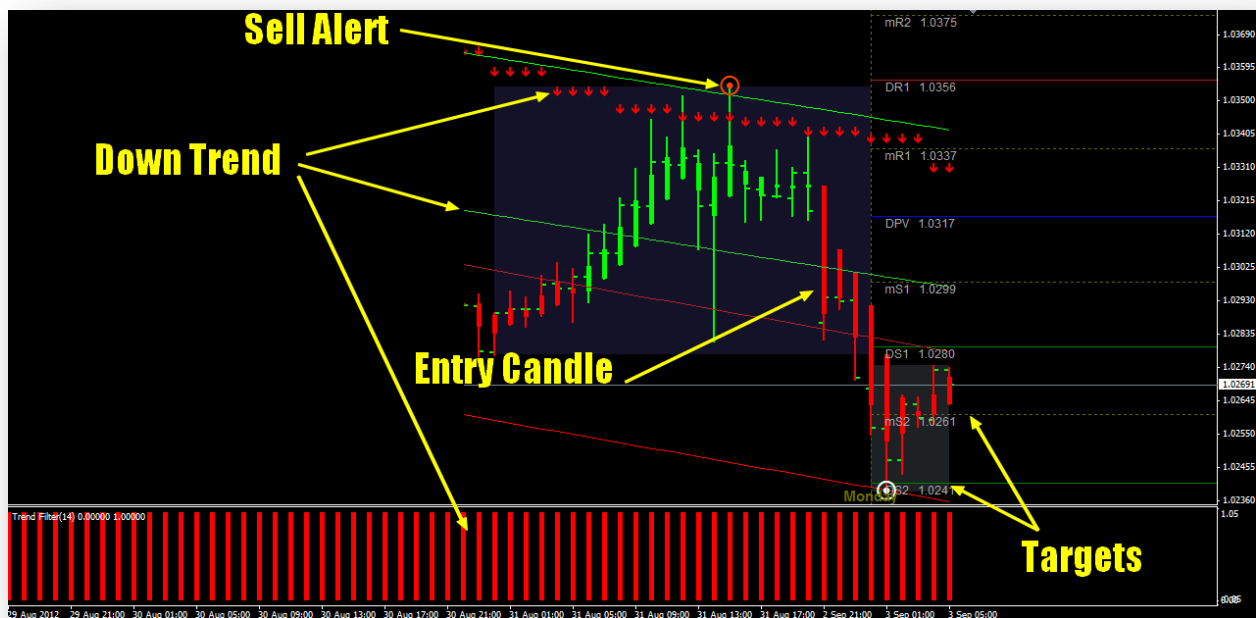

How It Works...

Remember that all we need to focus on is price/market direction. So we're going to use Trend Bars Indicator – Trend Candles – Entry Arrow to know exactly current market's direction. The system generates great results with 1 hour time frame, it's recommended that you only use 1 hour chart.

Next step, is to use Wave Signals Alerts indicator and Trend Channel, to know the best entry point.

Last step, is to determine the expected targets and make sure that your order would expire during 24 hours period.

Example (Sell Trade – AUD/USD 1Hour Chart)

First thing we checked : Trend bars indicator – Trend Channel and Entry Arrows. Once all of them are providing the same trend signal (down trend) we waited until we received an entry signal from Wave Alerts indicator and Trend Candles.

When that happened we realized that we have a confirmed/valid Sell Signal from the system.

How to know “when” we can expect price to reach the target?

Because we’re using daily pivots plus different kinds of trend indicators we can expect the target to be reached within 24 hours, same day usually. But to make it even easier for us, we can check price/market range.

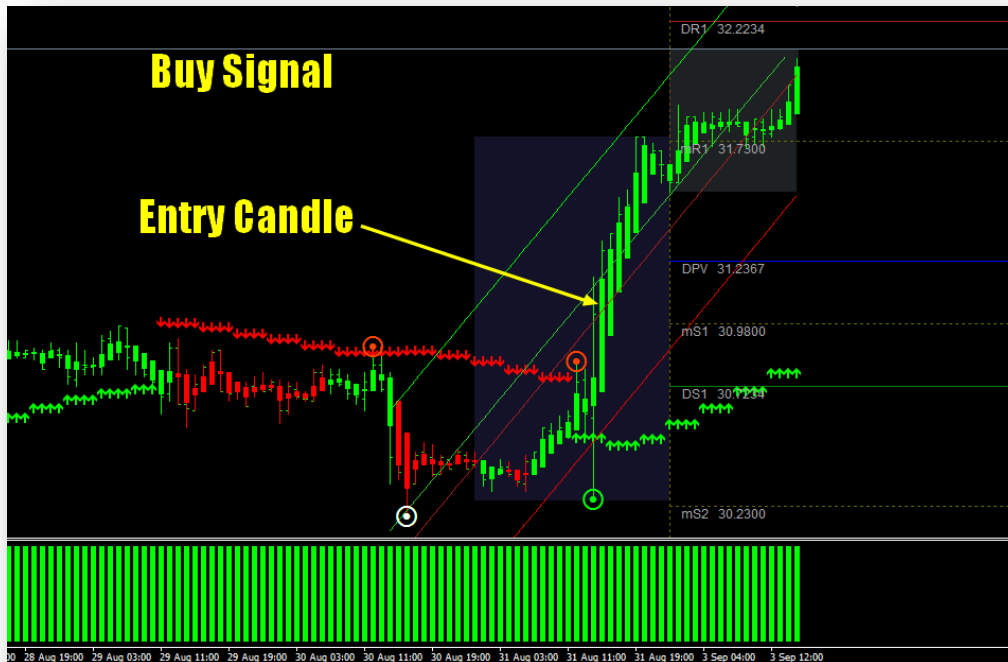

For example, if yesterday’s range was 700 pips, and 30 days range was 900 pips, then that probably means that yesterday’s move was huge and we can expect a slower move today. So we should use closer targets to entry point as possible, to make sure that price would reach the target before the order is expired.

Expiration period is the most important part in trading binary options, you must calculate your trades and signals based on this period very carefully.

Another Example (GBP/USD Buy Signal)...

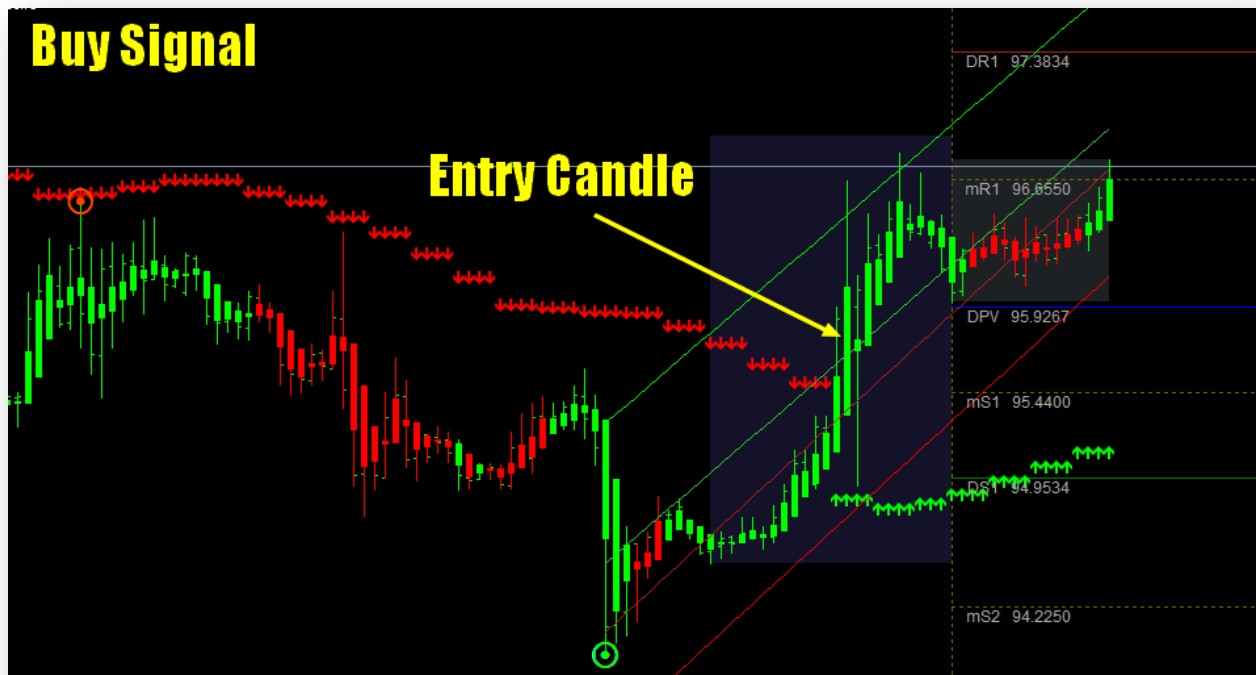

Another Example (Gold Buy Signal)

Google Inc Buy Signal...

CrudeOil Buy Signal ...

Dealing With Brokers

Many people choose to invest and trade in binary options because it is very easy to get started. Most brokerages require a small minimum investment, usually about \$100. With this small investment, you can almost double the money that you wish to invest, or at least by up to %80 per trade in certain situations.

Some binary options brokers even provide special kinds of options not available with most others. Like the 60 seconds options for example. Most binary options brokers provide the same trading platforms, while few of them have their own special trading platforms and/or trading software, those are usually big companies that invested a lot of time and money until they created their own tech tools and trading platform.

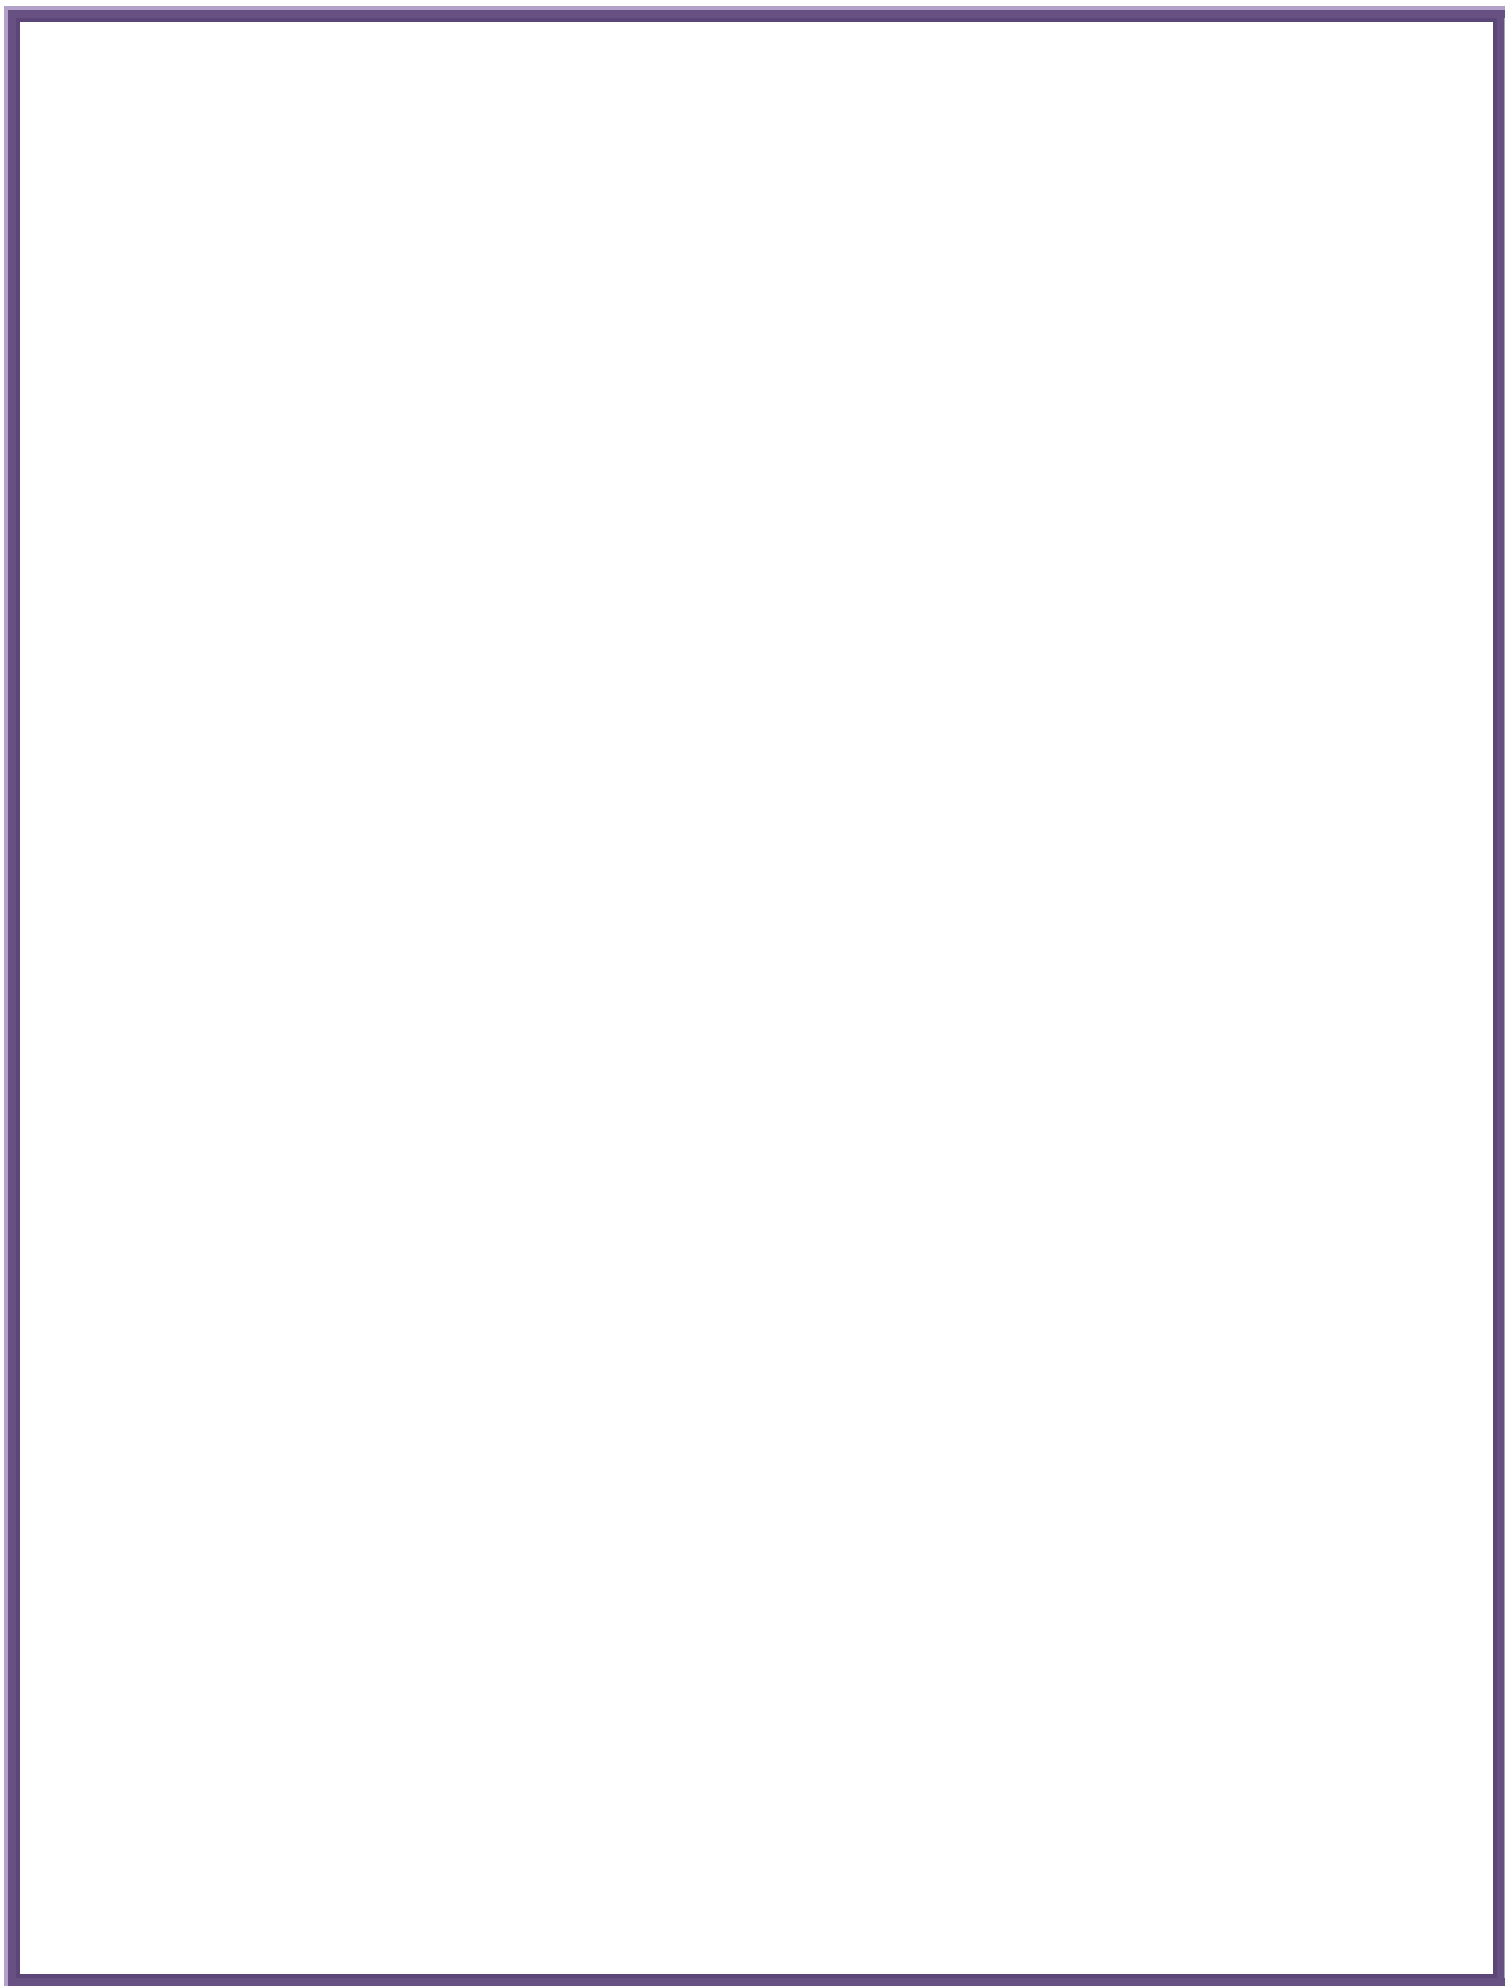

It's hard to say which is the best binary options brokers, it's almost a personal preference subject. When you pick and choose a broker, make sure that you preview as many as you can, compare their offers, tools and platforms then decide carefully which one to trade with.

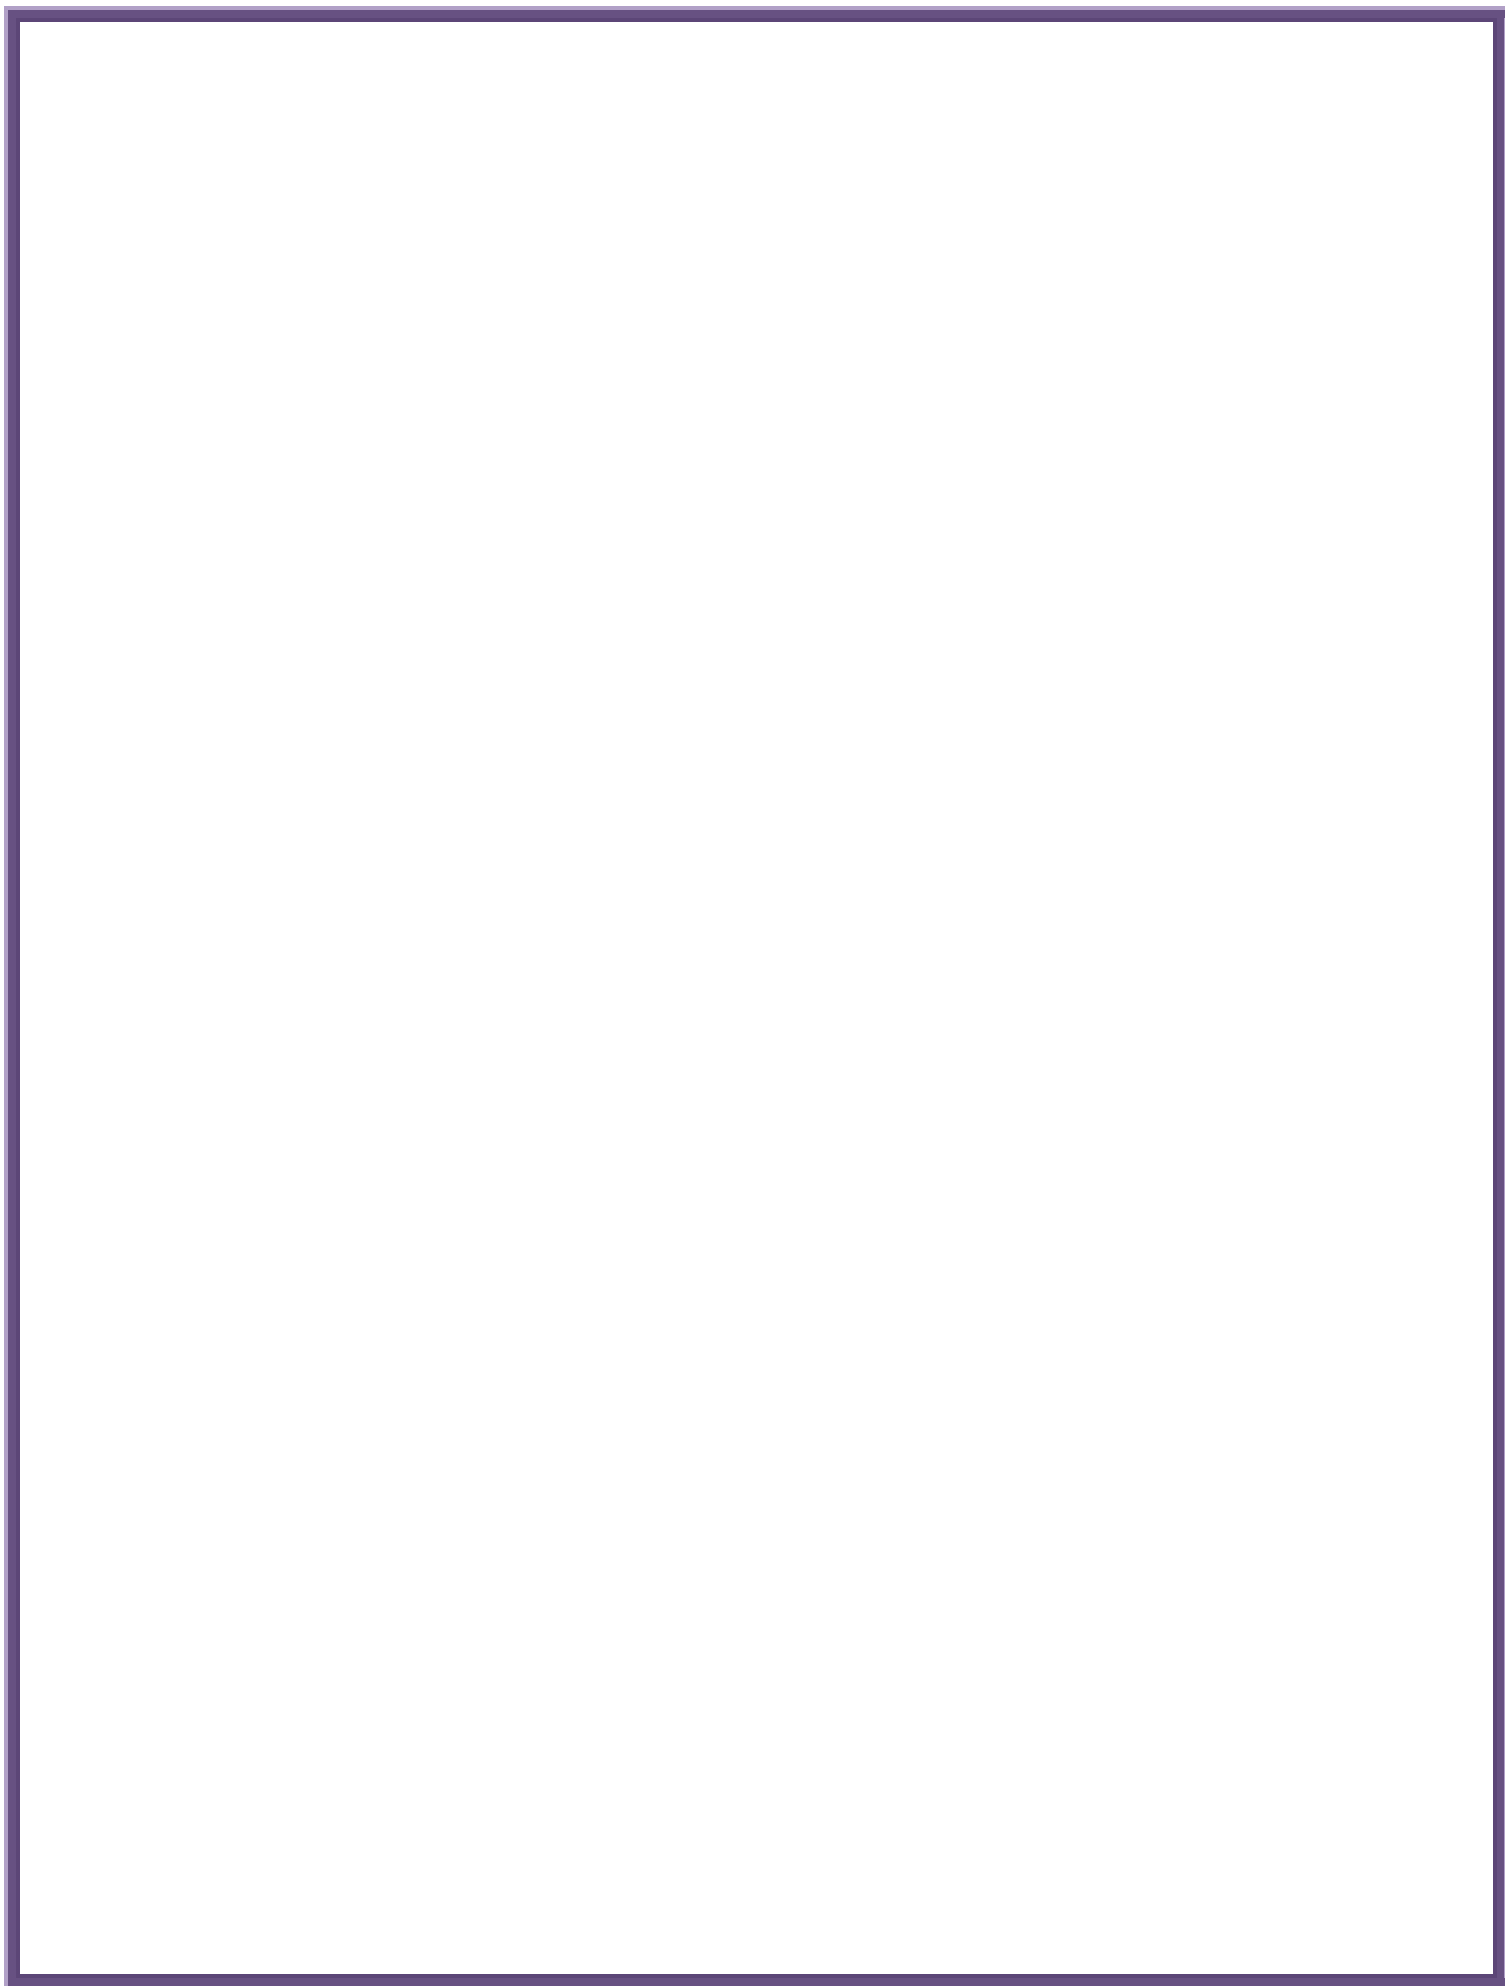

Here you will find a list of binary options brokers that we suggest that you review:

The vast majority of our clients have used this broker and have nothing but nice things to say. ***If you want the best returns and the best service this is the broker for you!***

You get an easy-to-use interface: quick, simple registration; industry leading support; and super fast payouts.

The minimum starting account balance is \$100 and the trading minimum is just \$10.

The range of binary contracts on offer covers a comprehensive range of markets. These include over ten stock indices, major commodities (Gold, Silver and Oil), Forex currency pairs and major international stocks.

DISCLAIMER

U.S. Government Required Disclaimer - Commodity Futures Trading Commission Futures and Options trading has large potential rewards, but also large potential risks.
